—FOGLESS[®] 3SIXTY[™]

HIGH PERFORMANCE FOGLESS[®] TECHNOLOGY

—IT'S NOT LESS FOG IT'S FOGLESS®

Lenses fog for many reasons, all of which are related to ambient temperature and moisture in the air. When a rapid temperature change occurs, micro-water droplets in the air will collect on untreated lenses, causing the lenses to fog and impede vision.

FogLess® 3Sixty™ Technology

Standard Anti-Fog

**FOGLESS® 3SIXTY™ TECHNOLOGY
PROVIDES THE ULTIMATE FOG
PREVENTION WHEN:**

- :: Transitioning between warm and cool environments
- :: Working in a humid or wet environment
- :: Engaging in an activity that causes perspiration
- :: Eye protection is used with respiratory equipment

THE CHOICE IS CLEAR

Bouton FogLess® 3Sixty™ was tested in accordance to procedures outlined in the European EN 166 standard. In performing this test, lenses were pre-treated and repeatedly exposed to moisture for an extensive period, wiping continually to simulate harsh field conditions.

**FOGLESS® 3SIXTY™ REMAINED CLEAR EVEN AFTER SIX MINUTES OF TESTING—
NO OTHER PRODUCT WITH STANDARD ANTI-FOG TREATMENT CAME CLOSE.**

Hydrophobic technology repels moisture and prevents fog from gathering on lenses.

PERFORMANCE

Most eyewear on the market has only a light anti-fog coating that wears away quickly. Only Bouton® FogLess® 3Sixty™ technology applies a densely bonded coating that continues to bead away water and moisture, even after repeated cleaning.

CAUTION

Lens fogging inhibits vision and productivity, which may result in workers removing their safety glasses—exposing their eyes to debris and impact.

PIP's advanced FogLess® 3Sixty™ formulation was developed to adhere permanently to the lens, ensuring long-lasting performance that is able to withstand multiple lens cleanings.
